

DERMPEELS

Peels for the Professional

TOP
SELLER

A chemical peel is a technique used by professional dermatologists to improve the skin on face, neck and hands by stripping away dry and dull skin to reveal the softer and smoother skin underneath. Through the application of a chemical solution, chemical peels achieve a non-invasive painless exfoliation that will eventually peel off the damaged skin. The new skin appears smoother and less wrinkled.

Chemical peels are appropriate for acne scars, aging skin, hyperpigmentation, melasma, chrono and photo-aging.

Depending on the skin damage, chemical peels can be superficial, medium or deep. The evaluation by a dermatologic surgeon should reveal which one to apply and which skins are not recommended to use chemical peels (pregnant women, patient with infections, broken skin and sunburns).

Comedogenic inflammatory acne 1

(Salicylic acid 2%)

Comedogenic inflammatory acne 2

(Azelaic Acid 20%, Mandelic Acid 10%, Phytic Acid 5%, Ferulic Acid 2%)

NATURAL ORIGIN

With Natural ingredients. Vegan.

Psoriasis, atopic dermatitis, acne scars

(Salicylic acid 2%, Lactic acid 10%, Citric acid 2%)

NATURAL ORIGIN

With Natural ingredients. Vegan.

Epidermal renewal and rehydration

Skins from 30-40 years (25% Pyruvic Acid, 25% Lactic Acid)

NATURAL ORIGIN

With Natural ingredients. Vegan.

Premature Aging 1

(Salicylic acid 2%, Lactic acid 2%)
